

Global Alliance for
Sustainable Energy
Enabling a sustainable value chain

The Net Zero Pledge

The **Global Alliance for Sustainable Energy** was created to **drive progress** towards the **full sustainability** of the **renewable energy industry**.

Renewable energy sources are already the cleanest and most sustainable solutions available for power generation and, through the alliance, **members commit to upholding innovation and sustainability as guiding principles**.

By promoting sustainability across the **entire value chain**, as members of the Alliance, we will work to **improve transparency, accountability, inclusivity, resource efficiency and responsibility** throughout the renewable energy industry's **operations and supply chain, therefore guaranteeing respect of human rights and biodiversity**.

Our goal is a **just transition to net-zero and socially responsible energy production**, achieving the ambition of The **Paris Agreement** to avoid the harshest impacts of climate change on people and the Planet.

Thus, we are **committed** to ensure a fully **sustainable energy**, by enabling a **responsible value chain**, focusing on **decarbonization** and mitigating **environmental impacts**, from raw materials extraction to energy delivery.

As signatories of the Pledge, we commit to a **Net Zero ambition** in line with **1,5°C reduction scenario** aligned with recognized international standards and, by the end of 2023, we will publicly target and update on a yearly basis this ambition across **scopes 1, 2 and 3**, with **challenging milestones at 2030 and 2040**.

As main strategic enablers, we will leverage on **Innovation and Circular Economy** across the entire value chain to foster **environmental impacts transparency** and **emission reduction** of the **energy sector**, by adopting certified and comparable **Life Cycle Assessment**, such as **Environmental Product Declaration** for the energy sector's **Main Equipment**, **maximizing** at the same time the usage of **secondary raw materials**.

We, as members of an **independent global alliance**, commit to those goals, being open to all actors recognizing the urgency of **tackling the climate emergency** according to the **just transition** principles and the need to **promote and embed sustainability and social responsibility** in the energy industry.
